About Me

MohammadTaha Hosseinzadeh > Python Developer & AI Specialist With over 3 years of experience in software engineering, my primary focus lies in Python, AI solution deployment, and automation architecture. Throughout my career, I have designed and delivered scalable backend systems and web solutions from conception to deployment. Beyond the Python ecosystem, I possess strong expertise in core web architectures, database management, and custom PHP plugin development. Alongside standard engineering practices, I have proven experience building and launching projects using the Vibe Coding methodology and AI-assisted tools. This allows me to significantly accelerate development velocity and convert complex business logic into clean, production-ready code. Driven by a research-oriented mindset and strong problem-solving skills, I am committed to

modern software standards. My fast learning capability enables me to quickly adapt to emerging technologies and execute optimal engineering solutions.
